

FAASTeam Greater Chicago District presents:

Aircraft Performance Monitoring

The General Aviation Steering Committee (GAJSC) System/Component Failure work group feels that flight data monitoring could help forecast system or component problems before reaching the point of failure and contributing to fatal general aviation accidents.

While most general aviation aircraft do not currently have flight data recording devices, manufacturers are beginning to offer self-contained flight data and visual data recorders for general aviation use. Reasonable performance expectations based on realistic data could result in safer flight operations.

Directions: Parking is available in the lot west of the terminal. Those flying in may park on the east ramp opposite the terminal.
